

Big Marine is a special line of additives for improving diesel and gasoline fuels, specially designed for use in fuel systems of large displacement and high-volume engines in the marine sector, operating with fuels with a high percentage of bio. All the products that make up the Big Marine line are made with special formulas that allow their use on all types of high-pressure diesel and gasoline fuel systems, equipped with the most modern smoke reduction systems. The chemical formulas that characterize Big Marine products have been created for use on specific types of engines operating in extreme conditions. The products of the Big Marine line improve the technical characteristics of the treated fuel, in accordance with the guidelines dictated by the European Fuel Quality Directive.

BIG MARINE

Tank Cleaning System is a special professional equipment that, thanks to an innovative centrifugal separation system, allows for the complete cleaning of diesel fuel for motor vehicles or heating. With this equipment, you can easily and innovatively clean the tank or reservoir from water, sediment, algae and contaminants, you can clean contaminated diesel fuel and bring it back to normal without waste.

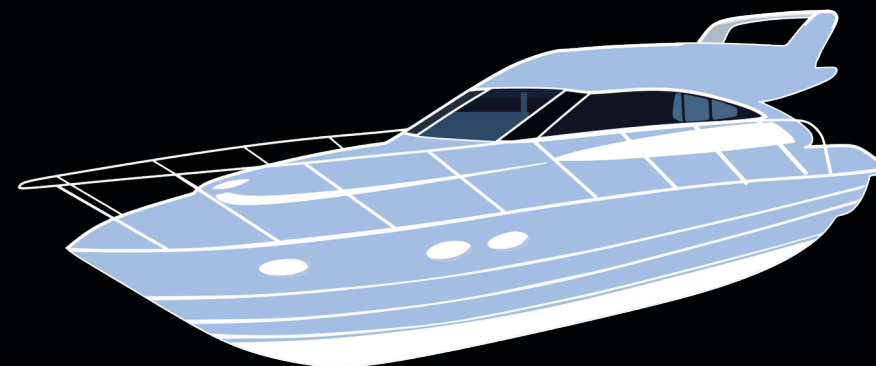

Made in Italy

NAUTIC products are also available in a practical 96-piece display case, which allows for easy public display. Particularly suitable for shops and repair shops.

AUTHORIZED DEALER

New line of additives for large displacement marine engines

PETROL COMBUSTION IMPROVER

Additive designed to convert unleaded gasoline into high-performance fuel. Increases octane number, improves combustion, increases engine torque and power. Provides better recovery and acceleration even at low revs. Designed to increase the octane number of gasoline by up to 5 points.

MULTIFUNCTIONAL ADDITIVE

Suitable for all 2- and 4-stroke gasoline marine engines, both carburettor and fuel injection. Prevents and eliminates tank condensation, increases octane by optimizing combustion, ensures cold starts, eliminates gaps in acceleration and annoying knocking.

ART. 2153

1 liter pack
Processes up to
1'000 liters of diesel fuel
DOSAGE: 1 liter per 1'000
liters of gasoline

LCC21N

Packaging 200 ml

DOSAGE:
200 ml x 20 l of gasoline
Can be used at any time

SUPER ADDITIVE

Ensures cleanliness of the entire diesel fuel system, removes water, paraffins, algae. Provides better lubrication of the pump and injectors, reduces the formation of carbon deposits in the combustion chamber and in the injector sprayer. Improves engine performance during fuel combustion, keeps the turbine clean and reduces engine oil contamination. Continuous use protects the engine and prevents problems, extends its service life and reduces consumption.

ART. 2082

1 liter pack
Processes up to
2'000 liters of diesel fuel

DOZIRANJE:

Koncentrirano čiščenje
1,5 liter x 1'000 litrov
Preventivno čiščenje
0,5 litra x 1'000 litrov

PURITANK DIESEL

Special additive for cleaning and regenerating dirty diesel in large tanks or reservoirs. Neutralizes pollution that causes instability and creates bacterial growth and sediment at the bottom. Improves engine performance. Dissolves dirt and returns clean diesel, optimizes combustion and reduces smoke and unburned particles.

ART. 2123

1 liter pack
Processes up to
2'000 liters of diesel fuel

DOSAGE:

Concentrated cleaning
1.5 liters x 1'000 liters
Preventive cleaning
0.5 liters x 1'000 liters

DIESEL ANTI-CONTAMINANT ADDITIVE

Special formula that counteracts aerobic and anaerobic bacterial growth and prevents the formation of algae and mold in the tank. The detergent contained in the additive works perfectly against the formation of biofilm on the walls, breaks it down and dissolves it. It works against the formation of condensation water and eliminates it. It is a stabilizer against degradation, improves engine performance, lubricates it and reduces smoke and unburned parts.

ART. 2137

1 liter pack
Processes up to 3'000
liters of diesel fuel

DOSAGE: 100 ml in
300 liters of diesel fuel

PURITANK GASOLINE

Gasoline additive specially designed for cleaning and regenerating gasoline in tanks or large containers. The product neutralizes the pollution of gasoline components that separate and precipitate to the bottom due to progressive instability, such as water, acidity due to the concentration of sulfur at the bottom. It dissolves and removes most contaminants such as mold and inert biomass from the tank in a simple and effective way. It prevents filter clogging and improves engine performance and protects it from breakdowns.

ART. 2141

P1 liter pack
Processes up to 2'000
liters of diesel fuel

DOSAGE:

Concentrated cleaning
1 liter x 1'000 liters
Preventive cleaning
0.5 liters x 1'000 liters

CETAN BOOSTER DIESEL

Concentrated additive for mixing with diesel fuel to increase engine power and improve performance. The improver with 2-EHN (2-ethylhexyl nitrate) increases the cetane index. Fuel quality can be improved by adding small amounts of a cetane number improver. An addition of 0.1%, for example 1 liter per 1000 liters of diesel fuel, will increase the cetane number by approximately 10%.

ART. 2139

1 liter pack
Processes up to
1,000 liters of
diesel fuel

DOSAGE: 1 liter per
1'000 liters of gasoline
